Project Report

BCA Sem VI AY 2020-21

The TajMahal Beverages (E-Commerce Website)

by

Exam No.	Name of Student
3253	Patrawala Mohammed Abbasbhai
3280	Shaikh Aadil Javed

Project Guide by:

Prof. Nainesh Gathiyawala

CERTIFICATE

This is to certify that Mr. Shaikh Aadil Javed, Patrawala Mohammed Abbasbhai examination number 3280, 3253 has satisfactorily completed his project work entitled The Tajmahal Beverages (E-Commerce Website) as partial fulfillment of requirements for BCA Sem VI, during the academic year 2020-21.

Date: 17/06/2021

Place: Surat Dr. Aditi Bhatt (I/c Principal)

SDJ International College,

Surat

Acknowledgement

The success and final outcome of this project required a lot of guidance and assistance from many people and I am extremely fortunate to have got this all along the completion of my Project work. Whatever I have done is only due to such guidance and assistance and I would not forget to thank them.

I owe our profound gratitude to our Director Mr. Deepak Vaidya, Coordinator Mrs. Aditi Bhatt, HOD Dr. Vaibhav Desai and Project guides Assistant Prof. **Nainesh Gathiyawala** of SDJ International College, who took keen interest on my Project work and guided me all along, till the completion of my Project work by providing all the necessary information for presenting a good Concept. I am extremely grateful to them for providing such a nice support and guidance though they had busy schedule managing the college affairs.

I am thankful and fortunate enough to get support and guidance from all Teaching staffs of Bachelor of Computer Application Department which helped me in successfully completing my Project work. Also, I would like to extend my sincere regards to all the non-teaching staff of Bachelor of Computer Application Department for their timely support.

A.J. Shaikh

Shaikh Aadil Javed 3280

1. INTRODUCTION

1.1 Project Summary

The TajMahal Beverages is a web application, which retails a wide range of Syrups, Beverage Bottle, Flavored Beverages, Sharbat, etc.

This project allows viewing various products available enables registered users to purchase desired products instantly using Online payment (Instant Pay) and also can place orders by using Cash on Delivery (Pay Later) option.

This project provides easy access to Administrators to view orders placed Using Pay Later and Instant Pay options.

To develop an E-Commerce website, several Technologies must be studied and understood. These include multi-tiered architecture, server, and client-side scripting techniques, implementation technologies such as ASP.NET, programming language (such as C#), and relational databases.

This is a project with the objective to develop a basic website where a consumer is provided with a shopping cart application where users can purchase a product and also know about the technologies used to develop such an application.

This document will discuss each of the underlying technologies to create and implement an E-Commerce Website.

1.2 Project Technical Profile

Field	Description
Project Title	The TajMahal Beverages
Developed For	The TajMahal Beverages
Language	C#.Net.
Front End	Microsoft Visual Studio 2012.
Back End	Microsoft SQL Server 2008.
Documentation	Microsoft Word 2016,
Tool	Wondershare EdrawMax
Team Members	2 Members.
Project Duration	4 Months.
Internal Guide	Mr. Nainesh Gathiyawala
Name of College	SDJ International College
Submitted By	Aadil Shaikh(3280) Mohammed Patrawala(3253)

1.3 System Requirements

The Tajmahal Beverages requires following technical specifications to run it properly and efficiently.

❖ Hardware Requirements:

- Intel dual core processor or higher.
- > 4GB RAM
- > 1GB empty space on hard disk.
- Working Internet connection.

Software Requirements:

- ➤ Windows 7 or Higher.
- Net Framework 4.0 or above.
- (No SQL server is required as it has cloud based database.)

2. Scope & Planning

2.1 Requirement Analysis

❖ Requirement Analysis :-

- Requirement analysis bridges the gap between system engineering and system design.
- Requirement analysis allows the software engineer to refine the software allocation and build models of data, function and behavioural domains that will be treated by software.
- Requirement analysis provides the software designer with a representation of information, function and behaviour that can be translated to data, architectural interface and component level designs Finally requirement specification provides information to design quality software.
- Requirement analysis also involves studying the current business system to find out how it works and where and improvements are possible
- The process of Requirement analysis is carried out in three steps namely Requirement Anticipation, Requirement Investigation and Requirement Specification are possible.

* Requirement Anticipation :-

Requirement Anticipation is very much part of system designing According to our understanding, it is to predict the feature requirement based on the previous experience of user aptitude.

Requirement Investigation :-

Requirement Investigation is the actual study of the system in use currently. Being a manual system, the user interviews, observation, review and course intuition play a major role in fact-finding process. More description about the requirement investigation can be found detail study of the existing system. Also we have done Data Gathering.

Requirement Specification :-

Specification can be a written document, a graphical model, a formal mathematical model, collection usage scenarios. prototype, or any combination of this. It is final product.

2.2 Feasibility Study

An important outcome of preliminary investigation is the determination that the system requested is feasible or not.

The feasibility of our project has been judged on the basis of time, technology and finance.

❖ Time :-

- Project is initiated with specific deadlines.
- We need to determine whether the deadlines are mandatory or desirable.
- Time is one of the most important factors in the development of any system but this kind of feasibility is hardly perfect in the system.

* Technology:-

- The system is built on C# Net, which is the latest and highly rated technology for developing desktop application.
- Microsoft SQL Server 2008 is the best suitable Back End.
- So system will be up to the mark according to technology:

> Finance :-

- The most important issue in the feasibility study is cost benefits analysis. The
 cost involved in the designing and developing a system should be good
 investment for the organization, the financial benefits must be justified by the
 cost.
- The finance and economical issues raised during preliminary investigations are as follow. There is no extra cost of hardware.

2.4 Future Development

It is not possible to develop a system that makes all the requirements of the user. User requirements keep changing as the system is being used. Some of the future enhancements that can be done to this system are:

- ➤ Based on the future security issues, security can be improved using emerging technologies.
- > WebApp development is in the process for mobility of the website.
- Shipping tracking module implementing in the website.
- > Live support to client.
- > Enhancement is to be made for the Mobile View.

2.5 Technology Details:-

> Hardware Requirements:

Processor : Intel(R) Core (TM) i3 CPU @ 2.30GHz

Memory: 2 GB

Hard Disk :1GB or Higher

> Software Requirements:

Operating System : Windows 7 or higher

Frontend : Microsoft Visual Studio 2012

Code Behind : C#

Backend : SQL Server Management Studio 2008

Other Tools : HTML, Java Script, Bootstrap, CSS &

jQuery

Input Device : Keyboard, Mouse

Output Device : Monitor

Browser : All Modern Browsers

4.3 Functional Testing

- Functional Testing is a type of software testing where, the system is tested against the functional requirements/specifications.
- Functions are tested by feeding them input & examining the output. Functional testing ensures that the requirements are properly satisfied by the application. This type of testing is not concerned with how processing occurs, but rather, with the results of processing.
- ➤ During functional testing, Black Box Testing technique is used in which the internal logic of the system being tested is not known to the tester.
- ➤ User Registration: Process has been properly working and all fields are validated through various validation checks.
- Login & password validation process has been co-operated properly.
- Cart and Wishlist managed perfectly.
- Order is being booked safely.
- Admin side handling & dynamic & real-time data integration module is implemented successfully.
- Sending Forgot Password or Confirm Registration through mails is working properly.

4.4 Environment Testing:

- System Testing is a level of software testing where complete & integrated software is tested.
- ➤ The purpose of this test is to evaluate the systems compliance with the specified requirements.
- ➤ The process of testing an integrated system to verify that it meets specified requirements.
- System Testing performed after Integration Testing & Before Acceptance Testing.
- Normally, independent testers perform System Testing.
- Firefox browser, internet explorer & chrome consider testing for environment operability of software.

a. Web Server: IIS/Apache

b. Database: SQL Server Management Studio

c. OS: Windows 10

d. Browser: Chrome / Internet Explorer / Firefox

5. Conclusion

- Purpose of this website is to make the work easier for customers.
- ➤ With the help of our website, customers can find variety of Beverages and get the details of our services.
- > Automation of this website improves the efficiency level.
- ➤ It is friendly graphical user interface when compared to the system that already exists.
- > It gives authentic access to the authorized users depending upon their user type.
- > It effectively overcomes the delay in communication.
